5. Programming the Monitoring Functions

- The meter has four display modes: rate, minimum, average, and total.
- The button can be toggled at any time to see any of the four modes. The button is also used to program the meter.
- LEDs above the display indicate which mode is currently showing.
- Any of the four modes can be programmed to be the default display.
- Alarms can be programmed for flows below a preset minimum and a preset average.
- Five different units of measure can be specified.

To Program:
- Press and hold button to enter programming mode, then release.
- Press button to advance value; press and hold to advance quickly.
- Release and wait to move to next parameter.

Please refer to the data sheets for more detailed instructions.
1. Meter Location

- Maximum pressure is 200 psi in Sch. 40 steel and Type L Copper. Consult CDI about other applications.
- Air must be free of water droplets. Locate the meter downstream of a dryer.
- Provide at least 5 diameters of straight pipe upstream of the meter.

2. Drilling the Holes

- Use 5200-DG drill guide.
- Air must be shut down.
- Wear eye protection.
- Shavings will enter pipe; make sure they will not cause problems downstream.
- Orient the drill guide for optimal meter visibility.
- A chain clamp, C-clamp, or band clamp may be used.
- Backing piece may be used if necessary.

3. Mounting the Meter

- Insert the band clamps into the slots provided.
- Insert probes into the holes in the pipe.
- Make sure flow arrow is pointing in the right direction.
- Engage and tighten the band clamps.

4. Powering the Meter

- Powering the Meter with 24V DC power supply and adapter cable.
